DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-8 and 10-13 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claim 10 is objected to because of the following informalities: The claim depends on claim 9, which has been cancelled. It is believed that claim 10 should be dependent on claim 1 because claim 9 has been combined with claim 1. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2828

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claims 1, 4, 8, 10, and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Cox et al. ('072).

With respect to claim 1, Cox discloses in Fig. 2 above a semiconductor laser comprising: a vertical resonator formed by reflectors 16 and 24; a photon-emitting active layer disposed between said at least one current diaphragm 140 for laterally circumscribing a current flowing

Art Unit: 2828

through said photon-emitting active layer and mode-selective regions 160 and 180 extending in a vertical direction within said vertical resonator and laterally delimiting said vertical resonator, said mode-selective regions-being implantation regions extending into said photon-emitting active layer.

With respect to claim 4, Cox discloses the current diaphragm being formed from an oxide (col. 4, line 59).

With respect to claim 8, it is inherent that the implantation regions having an electrical conductivity less than an electrical conductivity of said vertical resonator along the resonator.

With respect to claim 10, it is also inherent that the vertical cavity having an edge area (outside edge) and mode selective region 22 (more specific, 160 and 180) that extends in said edge area and a surrounding region of said edge area of said vertical resonator which is any region that is different from edge area.

With respect to claim 12, see the Fig. 2 for multilayer structure and the mode-selective regions 22 being disposed within that multilayer structure.

Allowable Subject Matter

4. Claims 2-3, 6-7, and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 13 is allowed.
